

SOLAR SYSTEM INSTALLATION PROCESS

ENERGEX

1: 4shore Solar Submit a Network Connection Application to Energex on your behalf

Before you commence the installation of solar power at your business or premises, you must gain permission from Energex to connect to the network by making a Network Connection Application. This is to ensure your solar power installation does not adversely impact the Energex network or other customers.

2: Application assessment

Once 4shore Solar have submitted your Network Connection Application, Energex will; conduct a network technical assessment to determine the impact of your solar power installation on the network, and the size of the system you may connect.

3: Connection Offer

Network Connection Application:

If approved, you will receive advice from Energex via mail or email, depending on what contact method you nominated in your application.

If approved, you are deemed to have accepted this Network Connection Contract.

Once you have received this advice, you may proceed with your approved solar power installation.

4: Installation

4shore Solar can now commence ordering stock and begin electrical works.

5: Contact Electricity Retailer to discuss feed-in tariff

When the electrical work has been completed at your business or premises, 4shore Solar submit an Electrical Work Request (EWR, once final bill is paid in full). This is to advise Energex that the work conducted at your business or premises has been carried out in accordance with the required Australian Standards, and to nominate the work Energex now needs to undertake at your premises.

The EWR also acts as your application for the feed-in tariff. You will need to negotiate feed-in tariff options directly with your electricity retailer.

6: Electricity retailer work request to perform the metering change

Your electricity retailer will send Energex a request (B2B request) to conduct the necessary metering change at your premises. This advice must come from your retailer as the outcome of the metering change will impact your electricity bill.

7: Metering change

Energex will arrange for the installation of your solar metering.

Energex will schedule the metering change at your business or premises, once we confirm the following:

- A Network Connection Contract exists (see steps 1-3).
- Receipt of the EWR from the electrician (see step 5).
- The work request from your nominated electricity retailer (see step 6).

The metering change will then be scheduled to be completed within 20 business days unless an alternative appointment is negotiated or an access appointment is required.
