### Powerwall 3

### **Power Everything**

Powerwall 3 is a fully integrated solar and battery system, designed to accelerate the transition to sustainable energy. Customers can receive whole home backup, cost savings, and energy independence by producing and consuming their own energy while participating in grid services. Once installed, customers can manage their system using the Tesla App to customize system behavior to meet their energy goals.

Powerwall 3 achieves this by supporting up to 20 kW DC of solar and providing up to 11.5 kW AC of continuous power per unit. It has the ability to start heavy loads rated up to 185 LRA, meaning a single unit can support the power needs of most homes. Powerwall 3 Expansions make it easier and more affordable to scale up customers' systems to meet their current or future needs. Powerwall 3 is designed for fast and efficient installations, modular system expansion, and simple connection to any electrical service.

## **Powerwall 3 Technical Specifications**

## System Technical Specifications

| Nominal Grid Voltage (Input & Output)   120/240 VAC   | Model Number                               | 1707000-xx           | ( <del>-</del> y      |                   |                      |
|---|--|----------------------|-----------------------|-------------------|----------------------|

<sup>&</sup>lt;sup>1</sup>Values provided for 25°C (77°F), at beginning of life. 3.3 kW charge/discharge power.

<sup>&</sup>lt;sup>2</sup>See <u>Powerwall 3 Installation Manual</u> for fuse requirements if using fuse for overcurrent protection.

<sup>&</sup>lt;sup>3</sup>15.4kW off-grid maximum continuous discharge power is only available if on-grid rating is 11.5 kW. If enabled, Powerwall 3 must be installed with an 80 A breaker and appropriately sized conductors.

<sup>&</sup>lt;sup>4</sup> Typical solar shifting use case.

<sup>&</sup>lt;sup>5</sup> Tested using CEC weighted efficiency methodology.

<sup>&</sup>lt;sup>6</sup>The customer is expected to provide internet connectivity for Powerwall 3; cellular should not be used as the primary mode of connectivity. Cellular connectivity subject to network operator service coverage and signal strength.

## Compliance Information

Certifications

UL 1973, UL 9540

#### Mechanical Specifications

<sup>&</sup>lt;sup>13</sup> These dimensions include the glass front cover being installed on Powerwall 3 Expansion.

<sup>&</sup>lt;sup>14</sup> The Powerwall 3 Expansion harness is a listed component of the UL 9540 certification.

### Solar Shutdown Device Technical Specifications

\_

The Solar Shutdown Device is a Mid-Circuit Interrupter (MCI) and is integral to the rapid shutdown (RSD) function required for rooftop PV systems in accordance with Article 690 of the NEC. When paired with Powerwall 3, solar array shutdown is initiated by an External System Shutdown Switch or the On/Off Enable switch located on Powerwall 3. Systems not subject to rapid shutdown requirements must still install one or more MCIs for functional purposes; see the Powerwall 3 installation manual for details.

| ΕI | ectrical      |
|----|---------------|
| S  | pecifications |

| Model  | MCI-1    | MCI-2                   | MCI-2<br>High Current |
|--|----------|-------------------------|-----------------------|
| Nominal Input DC Current Rating (I <sub>MP</sub> )     | 13 A     | 13 A                    | 15 A                  |
| Maximum Input Short Circuit Current (I <sub>SC</sub> ) | 19 A     | 17 A                    | 19 A                  |
| Maximum System Voltage                                 | 600 V DC | 1000 V DC <sup>15</sup> | 1000 V DC 15          |
| Maximum Disconnect Voltage 16                          | 600 V DC | 165 V DC                | 165 V DC              |

<sup>&</sup>lt;sup>15</sup> Maximum System Voltage is limited by Powerwall to 600 V DC.

#### RSD Module Performance

|-----------------------|--|
| RSD Initiation Method | External System Shutdown Switch or<br>Powerwall 3 Enable Switch      |

### UL 3741 PV Hazard Control (and PVRSA) Compatibility

See <u>UL 3741 Application Addendum</u>

<sup>&</sup>lt;sup>16</sup> Maximum Disconnect Voltage is the maximum voltage allowed across each MCI in the open position (Rapid Shutdown Initiated). An individual MCI-2 has a voltage rating of 165V but in combination (connected in the same string) their voltage ratings are additive.

## Gateway 3

Tesla Gateway 3 controls connection to the grid in a Powerwall system, automatically detecting outages and providing seamless transition to backup power. It provides energy monitoring that is used by Powerwall for solar self-consumption, time-based control, and backup operation.

### Performance Specifications

|------------------|--|
| Weight           | 16.3 kg (36 lb)                        |
| Mounting options | Wall mount                             |

### **Backup Switch**

The Tesla Backup Switch controls connection to the grid in a Powerwall system, and can be easily installed behind the utility meter or in a standalone meter panel downstream of the utility meter.

The Backup Switch automatically detects grid outages, providing a seamless transition to backup power. It communicates directly with Powerwall, allowing home energy usage monitoring from any mobile device with the Tesla app.

#### Performance Specifications

| Model Number                         | 1624171-xx-y                 |

<sup>&</sup>lt;sup>19</sup> Manually overrides the contactor position during a service event.

## **Backup Gateway 2**

\_

Backup Gateway 2 controls connection to the grid when paired with Powerwall 3, automatically detecting outages and providing seamless transition to backup power. Backup Gateway 2 also provides energy metering for solar self-consumption, time-based control, and backup operation.

In this system configuration, Powerwall 3 acts as the Site Controller, with the Backup Gateway 2 Site Controller disabled.

### Performance Specifications

| Model Number                            | 1232100-xx-y                           |
